

>>> Why Strath Oykel Wind Farm

BUILT AND HISTORIC ENVIRONMENT

An important consideration is to gain an appreciation of the site location in relation nearby properties and the wider built and historic environment. An initial step with site identification is to understand if there are any built and historic environment constraints and designations which may be impacted, for example:

- Residential properties within 1.5 m
- Scheduled Monuments
- Gardens and Designed Landscapes
- Listed buildings
- Inventory of Historic Battlefields
- Conservation Areas

The below map identifies designations and constraints that require due consideration in the assessment process.

Energiekontor considers that Strath Oykel is a good location in relation to the built environment. As the map demonstrates, the site lies outwith all listed buildings, scheduled monuments, battlefields inventory boundaries, Gardens and Designed Landscapes and the majority of local residents. There are no wind turbines within 1.5 km of the nearest property, but special consideration will be given to the design of the layout and separation distances as well taking into consideration any relationships with the wider built environment.
