

# Environmental Impact Assessment (EIA)

## EIA OVERVIEW AND ROUTEMAP

The term 'Environmental Impact Assessment' (EIA) describes a procedure that must be followed for certain types of projects before they can be given consent. The procedure is a means of drawing together, in a systematic way, an assessment of a projects' *likely significant environmental effects*. This helps to ensure that the importance of the predicted effects, and the scope for reducing them, are properly understood by the public and the relevant competent authority before it makes its decision.

- EIA enables environmental factors to be given due weight, along with economic or social factors, when planning applications are being considered.

- From a developer's point of view, the preparation of an EIA Report in parallel with project design provides a useful framework within which environmental considerations and design development can interact. Environmental analysis may indicate ways in which the project can be modified to avoid possible adverse effects.

- For the planning authority and other public bodies with environmental responsibilities, EIA provides a basis for better decision making.

- It also allows communities to engage in the process by offering views on the existing environment, and allowing views on the design process.

- We aim to submit the Environmental Impact Assessment Report and full application by the end of 2021
