| <b>DATE</b>    | 17 November 2025                                        | <b>CONFIDENTIALITY</b> | Public      |
| <b>SUBJECT</b> | Ballach Windfarm: further Cultural Heritage information |                        |             |

Dear Deirdre,

Thank you for your detailed response in relation to the Cultural Heritage chapter of the Ballach Windfarm Environmental Impact Assessment Report, and your continued assistance and advice in relation to potential impacts upon Scheduled Monuments within the study area for the Proposed Development.

This letter provides the additional information requested as per your letter of 29 September 2025:

- Photomontage visualisations in relation to Dun Mor, fort (SM4979);
- an update to the photomontage visualisations from Urchany barrow, 595m SW of (SM13523) to show the access tracks, substation, and borrow pit;
- provision of a figure to show viewpoint locations with turbine numbers; and
- updates to the assessments of Dun Mor, fort (SM4979) and Urchany barrow, 595m SW of (SM13523), to incorporate the new photomontage information.

As per our pre-application discussions, we had fully intended on providing the photomontages from Dun Mor, fort (SM4979) and on approach, but were unable to access these locations due to a locked gate. The time constraints prior to the application meant that another attempt to obtain the necessary photography for inclusion within the EIA was not possible.

It should also be noted that the borrow pit locations were marked in the EIA as “potential borrow pit search areas”. As the borrow pit location may be of concern to the setting of Urchany barrow, 595m SW of (SM13523) this location will be removed from the design.

The following visualisations and figures are provided as appendices to this letter:

- Visualisation 7.8a-f CHVP8 Photomontage view from Urchany, barrow 595m SW of (SM13523; A38) - update
- Visualisation 7.9a-f CHVP9 View from the Neolithic stone (NRHE ID 368713) looking towards Urchany, barrow (SM13523; A38) - update
- Visualisation 7.10a-d CHVP10 Photomontage from Dun Mor, fort (SM4979; A39)
- Visualisation 7.11a-d CHVP11 Photomontage on approach to Dun Mor, fort (SM4979; A39)
- Figure 7.3 – Viewpoint locations

The text below provides updates to the assessments based on the additional information provided, and in line with comments provided in the HES response.

### URCHANY BARROW, 595M SW OF (SM13523, A38)

This Scheduled Monument comprises a prehistoric burial mound probably dating to the 2nd millennium BCE. The monument appears to be a bowl barrow within an external ditch and bank, a rare form of burial monument in Scotland. The barrow survives as a prominent, circular, grass-covered mound, built mainly of earth but with some stone visible in its sides. The central mound, which probably contains one or more burials, is approximately 9m in diameter and stands 1.5m high. It is surrounded by a ditch, approximately

3m wide, and an external bank approximately 3.5m wide and standing up to 0.9m high. The monument is situated on a large glacial drumlin at the head of a glen, at around 220m above sea level, with extensive views to the southwest, southeast, and northeast.

The monument is of national importance due to its potential to make a significant addition to our understanding of the design and construction of burial monuments, the nature of burial practices, and their significance in Bronze Age and later society. The Urchany barrow is of particular importance as it appears to be a well preserved, rare type of burial monument more commonly associated with the ritual and funerary landscapes in Wessex. The setting of the barrow is an important element in its cultural significance, and the key aspects relate to its close association to nearby stones containing Neolithic rock art, as well as its sense of place in the local landscape and relationship with the post-medieval township that surrounded it, but respected the barrows footprint. Local, key views would be down the valley, and following the small burn to the southwest, as well as views towards the other non-designated heritage assets in close proximity. The views towards the barrow from the other prehistoric heritage assets would be a potential key element. Wider landscape views would be possible to the east, and there may be intervisibility between the barrow and Dun Mor, fort (SM4979, A40) in this direction as well, suggesting reciprocal views may also be important.

The proposed development boundary would be c.150m to the northwest of the barrow, with the closest turbine being located 600m to the northwest. The ZTV indicates that 11 to 15 turbines would, theoretically, have partial visibility from the monument, as would the access tracks and the top of the substation. The nearest turbine and substation would be partly screened by the rise in topography between the monument and the turbine. Views towards the monument from the south would include the proposed development in the background (rather than any foreground obstruction or alteration). The extensive views from the monument looking southwest, southeast and northeast, would therefore, not be obstructed by the proposed development.

A photomontage has been produced (Visualisation 7.8) from the barrow showing views looking towards the proposed development. The visualisations show that eleven turbines would be visible from the barrow, with visibility restricted to the blade tips of four turbines and views towards four other turbines partially blocked by intervening topography. The top of the substation would also be visible in front of Turbine 7. From the barrow looking towards the proposed development, the turbines are dominant in these views to the north and northwest. A photomontage has also been produced from the nearby stones featuring Neolithic rock art (Visualisation 7.9). This photomontage shows that views looking towards Urchany Barrow include ten turbines and the substation building in the background, though the intervisibility between the heritage assets is not interrupted.

The magnitude of impact during operation has been assessed as Minor Adverse. The cultural significance of the monument is derived from its intrinsic characteristics and its setting, contributing to our understanding of burial monuments and their placement in the landscape. The proposed development would not impact on the intrinsic characteristics. There would be changes to the setting of the monument as a result of the proposed development, but this is primarily in the periphery of a few key views on approach from the south and in the background of views from nearby stones featuring Neolithic rock art. These changes would not impact on the key views looking southwest, southeast, and northeast from the barrow, and do not interrupt the relationship between the barrow and the post-medieval settlement remains. As a heritage asset of High cultural significance, the resulting significance of effect would be Slight Adverse (not significant). The significance of effect has been determined as not significant as the proposed development

would not impact on how the barrow is understood, experienced and appreciated, with the proposed development only visible in the periphery when looking towards the barrow from the south, and in the background when looking at views from nearby stones featuring Neolithic rock art.

## DUN MOR, FORT (SM4979, A39)

The monument is a large sub-oval fort, probably dating to the Iron Age (c. 800BC-AD400), comprising an inner wall and two outer walls. It is situated in a commanding position with a steep ascent on the west, south and east sides and a precipitous drop on the north to the Breakachy Burn. It is one of a group of four duns (Dun Mor, fort (SM4979, A39); Dun Garbhlaich, fort (SM2422, A35); Dun a Chliabhain, fort (SM2424, A37); Dun Fhamhair, fort (SM5212, A35)) which appear to be placed to dominate the passage from the south into the northern Straths. While enjoying extensive views of, and being highly visible from, the fertile lands around Kiltarlity and Strathglass to the south, the fort appears to have been positioned to dominate and control north-south movement through the valley of the Breakachy burn. Directly to the north there is a non-designated extensive settlement likely to be contemporary with the fort.

The fort is of national importance as a well-preserved example of a prehistoric fort and is of particular interest because of the existence of additional outer defences on the most accessible sides. It has the potential to enhance considerably our understanding of prehistoric settlement and defensive structures. The setting of the fort is an important element of its cultural significance. The key views that the monument has with other forts in close proximity are key aspects to our understanding of the relationship between these forts and how they exerted control over the local landscape. The key views are southwards and to the north where the fort has extensive views along the valley of the Breakachy Burn. The fort's entrance is in the southeast, and it is likely that the historical approach to the monument would be from the east or southeast. Current approaches to the monument are from the west, and a looping path that leads east to west from north of Breakachy Farm, before looping back east towards the fort. There is no direct access from the south or southeast. Views towards the monument from this approach would be a key aspect of the monument. Key views across the nearby settlement are also an important aspect of the fort's setting. Reciprocal views between this and other forts, as well as contemporary settlement, are also likely to have been equally important in demonstrating the status and control of the fort's occupants.

The proposed development sits approximately 1.5km to the northwest of the fort, with the closest turbine being approximately 1.8km to the northwest. The ZTV indicates that between 6 to 15 turbines would be theoretically visible from the monument. The existing Fairburn and Auchmore windfarms are already visible from the fort looking in the direction of the proposed development, but it would increase the angle of view from the fort, where turbines are visible. The photomontage from the fort (Visualisation 7.10) shows that fifteen turbines would be visible when looking northwest. Three turbines only have visibility towards their blade tips, and eight are partially obscured by intervening topography. The photomontage from the east to west aligned path, directly south of the fort, indicates the proposed development would be visible on the western periphery of views towards the fort, and not directly behind it. As the approaching path is followed the proposed development would become more and more peripheral when looking towards the fort and then would be behind the viewer when approaching from the west.

The magnitude of impact has been assessed as Minor Adverse due to slight changes within the setting of the fort. The operation of the proposed development in the landscape would introduce additional modern structures into the setting of the monument. However, the proposed development would not interrupt any key views the monument has with the nearby settlement, other forts in close vicinity, or reduce our ability to

understand the position the monument held in the landscape. Key views also extend primarily south and north and would not be changed by the proposed development. On the historical approach to the fort from the east, the proposed development would only be present in the background, and in views from the south, the proposed development would be on the western periphery. As a heritage asset of high cultural significance, the significance of effect would be Slight Adverse (not significant). The significance of effect has been determined as not significant as the proposed development would not impact on how the monument is understood, experienced and appreciated.

Please don't hesitate to contact us if you require further information in relation to the cultural heritage impacts assessed within the EIA Report.

Kind regards,

Kevin Paton
